SUMMARY

Backend Engineer with experience in OCR, NLP, and cloud deployments. Skilled in building scalable APIs, integrating enterprise systems, and orchestrating ETL pipelines with Apache Airflow. Proven track record of reducing manual workloads up to 90% and improving system reliability through automation, data-driven processes, and scalable backend design.

EDUCATION

University of California, Irvine

B.S. in Computer Science (Systems and Software)

Graduated: Dec 2021

TECHNICAL EXPERIENCE

Software Engineer (Freelance)

Remote

Independent Project / Client Work

Dec 2024 – Present

- Built a serverless AWS pipeline (**SES**→**S3**→**Lambda + Textract**) that redacts Korean SSNs in PDFs, logs to MySQL, and returns compliant files in 6 s – eliminating manual PII
- Built a real-time fleet-management web app in **React/FastAPI**, using **Firebase Auth + Firestore** to stream live driver-truck-job data and replace manual spreadsheets

Tri Pointe Homes

Irvine, CA

Software Engineer

Oct 2021 - November 2024

- Designed and implemented an **SVM-based classification pipeline** for 200K+ support tickets (84% accuracy), saving **3,000+ manual hours**
- Designed and automated **ETL pipelines in Python** processing **1M+ records**, orchestrated with **Apache Airflow** to ensure fault-tolerant, repeatable workflows
- Built an **OCR automation** with **Python**, **Tesseract**, and **API integrations** (internal ERP, DocuSign) to process standardized sales PDFs, reducing manual workload by 70% and increasing data accuracy
- Developed **SQL schemas** for performance reporting; optimized for scalability and query efficiency
- Built **Apache Airflow-scheduled** integrations for DocuSign and Laserfiche, automating ticket entry cutting manual effort by 90 %
- Implemented **employee lifecycle automation** using Python + Freshservice APIs, reducing onboarding time from 3 days to 2 hours

Developer Intern

May 2021 - Sep 2021

- Automated ERP data uploads via **SQL scripts**, reducing manual processing time by 99%
- Processed and normalized 400K+ user records using **Python** and **pandas** to improve reporting accuracy
- Deployed real-time monitoring dashboards in **Tableau** for automation KPIs and system performance

FleetUp

Milpitas, CA

QA Intern

June 2020 - September 2020

- Developed and executed automated test scripts using Selenium WebDriver to validate functionality, UI behavior, and cross-browser compatibility of multiple web applications.
- Validated ingestion of Electronic Logging Device data into SQL databases by performing manual queries and cross-checking against application outputs to ensure accuracy and integrity.

PROJECTS

Jlockbusters – Full-Stack Movie Search Engine

jlockbusters.com

- Built a full-stack web application using **Spring Boot (REST API)** and **React** for dynamic movie search
- Implemented **Google reCAPTCHA**, **OAuth2 login** and session-based authentication for secure user sessions
- Architected **MySQL master-slave replication** for read/write separation, reducing query latency

TECHNICAL SKILLS

Languages: Java, Python, C++, SQL, JavaScript, HTML/CSS

Frameworks & Libraries: FastAPI, React, Spring Boot, JUnit, Selenium, pandas, NumPy, Matplotlib, Scikit-learn

Developer Tools: Docker, AWS, Apache Airflow, React, Git, Docker, Kubernetes, Tableau, Mulesoft, Firebase
